

Ideation Phase

Brainstorm & Idea Prioritization Template

Date	03.10.2026
Team ID:	6ab8b2d930f9767f8772e455 / SWTID-2026-8679
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	4 Marks

Brainstorm & Idea Prioritization Template:

Brainstorming provides a free and open environment that encourages everyone within a team to participate in the creative thinking process that leads to problem solving. Prioritizing volume over value, out-of-the-box ideas are welcome and built upon, and all participants are encouraged to collaborate, helping each other develop a rich amount of creative solutions.

Use this template in your own brainstorming sessions so your team can unleash their imagination and start shaping concepts even if you're not sitting in the same room.

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Brainstorm & idea prioritization

Use this template in your own brainstorming sessions so your team can unleash their imagination and start shaping concepts for the ticket classification flow.

10 minutes to prepare | 1 hour to collaborate | 2-8 people recommended

●

Before you collaborate

A little bit of preparation goes a long way with this session. Here's what you need to do to get going.

A

Team gathering

Define who should participate in the session

Team members listed on Page 2.

B

Set the goal

Focus on automatically classifying school IT tickets and notifying the Caller.

C

Learn the tools

Review how Flow Designer triggers, conditions and actions work in ServiceNow.

1

Define your problem statement

What problem are you trying to solve? Frame your problem as a How Might We statement. This will be the focus of your brainstorm.

PROBLEM

How might we automatically classify school IT tickets by their Short Description, so every Caller gets a consistent Category and Subcategory and a confirmation email?

Key rules of brainstorming

To run a smooth and productive session

Stay on topic.	Encourage wild ideas.
Defer judgement.	Listen to others.
Go for volume.	If possible, be visual.

Step-2: Brainstorm, Idea Listing and Grouping

2 Brainstorm

Write down any ideas that come to mind that address your problem statement.

Anand G (Team Lead)	Hiruthick T.V	Hariharasudhan.M	Aswin Balaji .M	Dharani dharan .M
Automatic ticket classification		Category / Subcategory	Automatic routing	Email notification
Keyword-based classification		No-code Flow Designer	Dependent field logic	Ticket confirmation
Easy maintenance		Flow trigger configuration	Classification rules	Caller notification

3 Group ideas

Similar ideas are clustered and each cluster is given a sentence-like label (scope of the project).

Start the flow when a new ticket needs a category	Classify by what the Short Description contains	Tell the Caller the request was received
Trigger: Record Created on Incident Workflow	Wi-Fi / Network -> Network / Wi-Fi	Send Email to Caller > Email
Condition: Category is Empty	Projector -> Hardware / Projector	Subject: Your Request for the issue has been submitted.
	Forgot password -> Access / Forgot Password	
	Slow Computer -> Performance / Slow Computer	

Step-3: Idea Prioritization

4 Prioritize

Place the ideas on this grid to decide which ideas are important and which are feasible.

The team prioritized automatic classification, dependent Category/Subcategory selection, and email notification because they directly address manual classification and are feasible using ServiceNow Flow Designer.
