

Project Design Phase-II Technology Stack (Architecture & Stack)

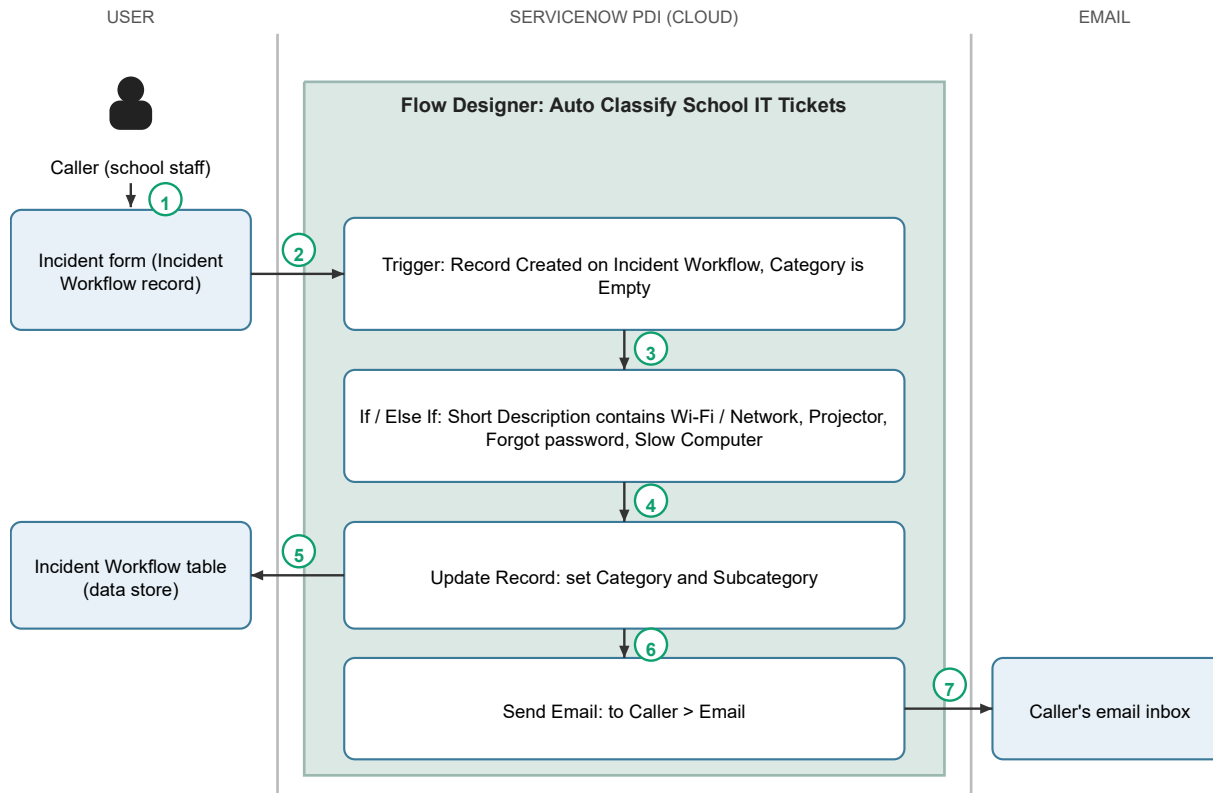

Date	03.10.2026
Team ID:	6ab8b2d930f9767f8772e455 / SWTID-2026-8679
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	4 Marks

Technical Architecture:

The Deliverable shall include the architectural diagram as below and the information as per the table 1 & table 2

Example: Auto classification of school IT tickets on ServiceNow (Flow Designer)

Reference: ServiceNow Flow Designer documentation

Guidelines:

- Include all the processes (as an application logic / Technology Block)
- Provide infrastructural demarcation (Local / Cloud)
- Indicate external interfaces (third party APIs etc.)
- Indicate Data Storage components / services
- Indicate interface to machine learning models (if applicable)

Table-1 : Components & Technologies:

S.No	Component	Description	Technology
1.	User Interface	How the Caller interacts with the application: creates an incident with a Short Description	ServiceNow incident form (Incident Workflow)
2.	Application Logic-1	Trigger: starts the flow when a new record is created and Category is Empty	ServiceNow Flow Designer: Record Created trigger
3.	Application Logic-2	Classification: If / Else If conditions on the Short Description, then set Category and Subcategory	Flow Designer conditions and Update Record action
4.	Application Logic-3	Notification: sends a confirmation email to the Caller	Flow Designer Send Email action
5.	Database	Incident Workflow table that stores the ticket, Category and Subcategory	ServiceNow platform table
6.	Cloud Database	Database service on cloud	Managed by the ServiceNow instance (PDI)
7.	File Storage	File storage requirements	Not used in this project
8.	External API-1	Purpose of external API used in the application	None
9.	External API-2	Purpose of external API used in the application	None
10.	Machine Learning Model	Purpose of machine learning model	None (keyword conditions only)
11.	Infrastructure (Server / Cloud)	Application deployment on Local System / Cloud	ServiceNow Personal Developer Instance (cloud), Global application
	Local Server Configuration:		Not applicable
	Cloud Server Configuration:		ServiceNow PDI [Enter instance details if required]

Table-2: Application Characteristics:

S.No	Characteristics	Description	Technology
1.	Open-Source Frameworks	Open-source frameworks used	None; built with the ServiceNow low-code Flow Designer
2.	Security Implementations	Security and access controls provided by the platform	ServiceNow authentication and role-based access [Confirm roles]

3.	Scalable Architecture	More keywords and categories can be added as extra If / Else If conditions	ServiceNow Flow Designer
4.	Availability	Cloud-hosted instance; availability depends on the PDI staying active	ServiceNow PDI
5.	Performance	Flow runs automatically on record creation [Insert observed results after testing]	ServiceNow Flow Designer
