

AUTO TICKET CLASSIFICATION

School IT ticket support

Project: Auto Ticket Classification using Flow Designer (ServiceNow PDI)

Based on the project scenario [Insert interviews / observations if conducted]

Enter

What do people experience as they begin the

process?

3

Engage

In the core moments in the process, what

happens?

4

Exit

What do people typically experience as the

5

Extend

What happens after the experience is over?

process finishes?

Steps What does the person (or group) typically experience?	Experience an IT issue at school	Decide to report the issue	Open the incident form in ServiceNow	Enter the Caller	Type a Short Description, e.g. Projector not working	Submit the incident	Record Created trigger fires (Category is Empty)	If / Else If checks the Short Description	Update Record sets Category and Subcategory	Send Email action runs	Caller receives confirmation email	Ticket is saved with its classification	IT support sees Category and Subcategory	IT team works the ticket	Caller waits for resolution
Interactions What interactions do they have at each step along the way?	Places: classroom, staff room or computer lab	Things: Wi-Fi, projector, login, computer	Things: ServiceNow incident form	Incident form: Caller and Short Description fields	Category is Empty when the record is created	New Incident Workflow record is saved	Flow Designer: Auto Classify School IT Tickets	Conditions: Wi-Fi / Network, Projector, Forgot password, Slow Computer	Incident Workflow record is updated	Recipient: Caller > Email	Subject: Your Request for the issue has been submitted.	Caller's email inbox	Incident Workflow record with Category and Subcategory	People: IT support team	
Goals & motivations At each step, what is a person's primary goal or motivation? ("Help me..." or "Help me avoid...")	Help me get my device or network working again	Help me report this without extra effort		Help me describe the problem in a few words	Help me avoid choosing the wrong category		Help me get my ticket classified consistently			Help me feel confident my request was received			Help me know what happens next		
Positive moments What steps does a typical person find enjoyable, productive, fun, motivating, delightful, or exciting?				Only a short description is needed to start			Category and Subcategory are set without manual effort	Same keyword gives the same classification		Confirmation arrives right after processing			Consistent categories make tickets easier to sort		
Negative moments What steps does a typical person find frustrating, confusing, angering, costly, or time-consuming?	The issue interrupts teaching or work			Unsure which Category applies			A Short Description that matches no condition is not classified			No confirmation if the email is not delivered			Waiting time depends on the IT team (outside this flow)		
Areas of opportunity How might we make each step better? What ideas do we have? What have others suggested?	How might we make it clear what to write in the Short Description?			How might we encourage keywords such as Wi-Fi or Projector?			How might we handle descriptions that match none of the four conditions?			How might we add ticket details to the confirmation email?			How might we add more keywords and categories later?		

Note: this journey describes the intended automated behaviour of the flow. Flow implementation is in progress (Milestone 3); entries are draft observations from the project scenario, not test results.
