Project Report

Auto Ticket Classification using Flow Designer

Date: 03.10.2026 | Team ID: 6ab8b2d930f9767f8772e455

1. INTRODUCTION

1.1 Project Overview

Auto Ticket Classification using Flow Designer automates the classification of school IT support tickets on a ServiceNow Personal Developer Instance (PDI). The flow **Auto Classify School IT Tickets**, built in Flow

Designer in the Global application, runs when a new Incident Workflow record is created. It checks the Short Description, assigns the Category and Subcategory, and then sends a confirmation email to the Caller.

1.2 Purpose

To reduce manual classification of school IT tickets and to give consistent ticket classification, with an automatic confirmation to the Caller.

2. IDEATION PHASE

2.1 Problem Statement

School IT support tickets have to be classified by hand, which is repetitive and can be inconsistent. See the completed *Define the Problem Statements* document.

2.2 Empathy Map Canvas

See the completed *Empathy Map Canvas* document.

2.3 Brainstorming

See the completed *Brainstorm & Idea Prioritization* document.

3. REQUIREMENT ANALYSIS

3.1 Customer Journey map

See the completed *Customer Journey Map* document.

3.2 Solution Requirement

See the completed *Solution Requirements* document.

3.3 Data Flow Diagram

See the completed *Data Flow Diagram & User Stories* document.

3.4 Technology Stack

Component	Used in this project
Platform	ServiceNow Personal Developer Instance (PDI)
Module	Flow Designer (Flow, Trigger, If / Else If, Update Record, Send Email)
Application	Global
Table	Incident Workflow

Not used: external APIs, machine learning, file storage, open-source frameworks.

4. PROJECT DESIGN

4.1 Problem Solution Fit

Problem: manual, inconsistent classification of school IT tickets. Solution: a Flow Designer flow that classifies each new ticket from its Short Description and confirms receipt to the Caller.

4.2 Proposed Solution

Flow **Auto Classify School IT Tickets** — Trigger: Record Created, Table: Incident Workflow, Condition: Category is Empty. If / Else If on Short Description, then Update Record:

Short Description contains	Category	Subcategory
“Wi-Fi” or “Network”	Network	Wi-Fi
“Projector”	Hardware	Projector
“Forgot password”	Access	Forgot Password
“Slow Computer”	Performance	Slow Computer

Email: Send Email action, Recipient: Caller > Email, Subject: “Your Request for the issue has been submitted.” **4.3**

Solution Architecture

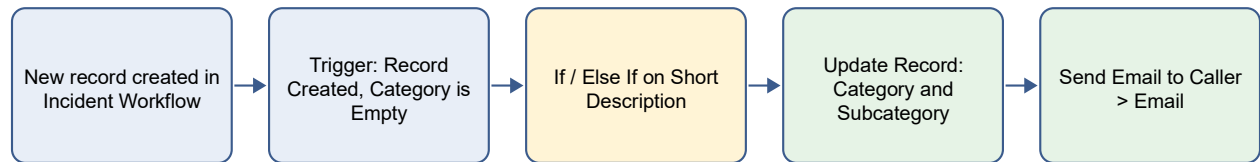

Figure: planned flow architecture . Only the trigger is currently being configured.

5. PROJECT PLANNING & SCHEDULING

5.1 Project Planning

The project was planned using a product backlog and two sprints. Sprint 1 covered Flow Setup, Trigger Configuration, Wi-Fi/Network classification and Projector classification. Sprint 2 covered Forgot Password, Slow Computer, Email Notification, Activation and Testing.

6. FUNCTIONAL AND PERFORMANCE TESTING

6.1 Performance Testing

Planned approach: create test Incident Workflow records whose Short Description contains each keyword, then check the Category and Subcategory and the email to the Caller. Activate the flow before testing.

7. RESULTS

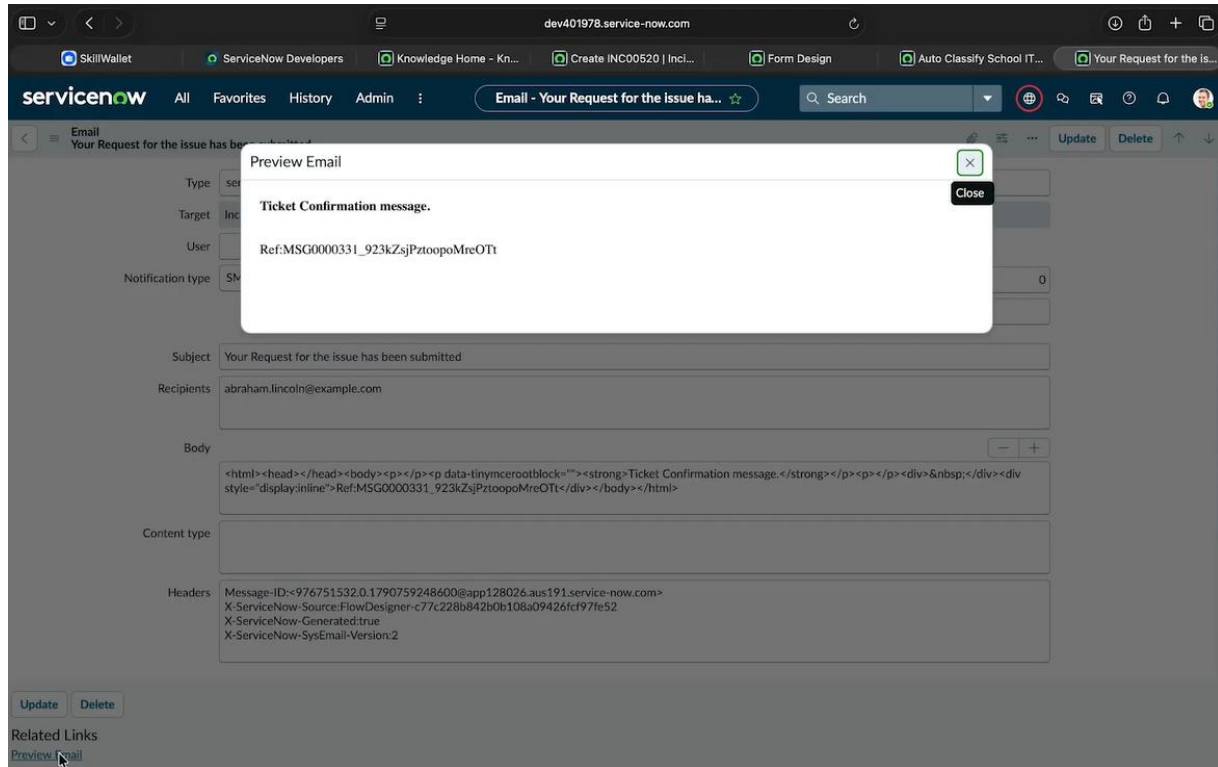

7.1 Output Screenshots

Flow Designer builder / trigger:

The screenshot displays the ServiceNow Workflow Studio interface for the 'Auto Classify School IT Tickets' flow. The flow is in a 'Completed' state, as indicated by the 'Test Run - Completed' button. The execution details show the flow was run as 'System Administrator' on 2026-09-30 02:07:27, taking 839ms. The trigger is 'Incident Workflow Created'. The actions section lists eight steps: 1. 'If SD Wi-Fi or Network' (Flow Logic, Evaluated - False, 100ms), 2. 'Update Record' (Core Action, Not Run, 15ms), 3. 'Else If SD is Projector or Hardware' (Flow Logic, Evaluated - False, 15ms), 4. 'Update Record' (Core Action, Not Run, 0ms), 5. 'Else If SD is Forget Password' (Flow Logic, Evaluated - False, 0ms), 6. 'Update Record' (Core Action, Not Run, 0ms), 7. 'Else If SD is Performance' (Flow Logic, Evaluated - False, 0ms), and 8. 'Update Record' (Core Action, Not Run, 0ms).

Step	Action	Type	Status	Start time	Duration
1	If SD Wi-Fi or Network	Flow Logic	Evaluated - False	2026-09-30 02:07:27	100ms
2	Update Record	Core Action	Not Run		
3	Else If SD is Projector or Hardware	Flow Logic	Evaluated - False	2026-09-30 02:07:27	15ms
4	Update Record	Core Action	Not Run		
5	Else If SD is Forget Password	Flow Logic	Evaluated - False	2026-09-30 02:07:27	0ms
6	Update Record	Core Action	Not Run		
7	Else If SD is Performance	Flow Logic	Evaluated - False	2026-09-30 02:07:27	0ms
8	Update Record	Core Action	Not Run		

confirmation email:

8. ADVANTAGES & DISADVANTAGES

Advantages

- Reduces manual classification of tickets.
- Gives consistent Category and Subcategory.
- Caller receives an automatic confirmation email.

Disadvantages

- Classification depends on keywords in the Short Description.
- Only the four listed ticket types are covered.

9. CONCLUSION

The project aims to automate school IT ticket classification and Caller confirmation using Flow Designer. Implementation is in progress; [update the conclusion once the flow is activated and tested].

10. FUTURE SCOPE

Further ticket types and keywords can be added by extending the If / Else If branches. Future enhancements may include additional categories, improved keyword handling and more comprehensive notification details.

11. APPENDIX

Source Code: Not applicable — the project is implemented using ServiceNow Flow Designer.

Dataset Link: Not applicable — no external dataset is used in this project.
